

Interloc Series

Wall & Soffit Panel System

The Interloc Wall & Soffit Panel System is a smooth wall panel that can be installed both horizontally and vertically, and is commonly used as a soffit panel with perforations. This concealed fastener wall panel is installed on a floating clip system ideal for thermal expansion and contraction. The Interloc panel series comes in a variety of coverages with options for flush wall or 0.5" reveal.

Depending on the coverage chosen, the Interloc Panel comes in a flat pan, with v grooves, with perforations, or a combination of these options. Available in our Standard 24 gauge colour series, this panel can also be produced in our Woodgrain Series, FormaTouch Textured Series, and PVDF Kynar Colours.

Interloc12
